

The 6th International Conference "Distributed Computing and Grid-technologies in Science and Education"

Contribution ID: 68

Type: **sectional reports**

Scalable cloud without dedicated storage.

Monday, 30 June 2014 16:30 (20 minutes)

We present a prototype of a scalable computing cloud. It is intended to be deployed on the basis of a cluster without a separate dedicated storage. The dedicated storage is replaced by the distributed software storage. In addition, all cluster nodes are used both as computing nodes and as storage nodes. This increases utilization of the cluster resources as well as improves the fault tolerance and performance of distributed storage. Another advantage of this solution is high scalability with relatively low initial and maintenance cost. The solution is built on the basis of the open source components like CloudStack, Ceph, etc.

Primary authors: Mr ZAROCHEVSEV, Andrey (SPbSU); Dr KOMPANIETS, Mikhail (SPbSU)

Presenter: Dr KOMPANIETS, Mikhail (SPbSU)

Session Classification: Section 1 - Technologies, architectures, models, methods and experiences of building distributed computing systems. Consolidation and integration of distributed resources

Track Classification: Section 1 - Technologies, architectures, models, methods and experiences of building distributed computing systems. Consolidation and integration of distributed resources
