## Realistic simulation of the MPD Time Projection Chamber with Garfield

*Friday, 4 October 2019 09:45 (15 minutes)*

The detailed simulation of electron drifting in the MPD TPC was made with CERN Garfield toolkit for the simulation of gas particle detectors. For electron transporting were used the 10% Ar + 90% CH<sub>4</sub> gas mixture with impact of corresponding magnetic and electric fields from MPD TPC Technical Design Report (rev. 07). Ionization processes were investigated in the wire planes area near Read-Out Chambers of the TPC. The Read-Out Chambers were modeled with different gaps to gate grid and some values of gate voltage.
