Accounting system for the computing cluster at IHEP

Monday, 4 July 2016 17:30 (1 hour)

Accounting system is a very important part of any computing cluster which allows to understand how and by whom the core of the cluster - computing resources are used. This task become more and more complicated when different groups of users are present and it needed somehow to calculate general usage to make a bill. In this work described the development of such system for Ihep central computing cluster.
